

IoT Motivations (Why IoT Exists)

Everyday things

Agriculture automation

Embedded mobile

energy consumption

security and surveillance

M2M wireless sensor network

Building management

pet, person, vehicle's and asset monitoring & controlling

smart homes and cities

**Data Collection
using sensors**

**Data transmission
using networks**

**Data Processing in
cloud Edge and
Device**

**Actuation to take
actions**

IoT Motivations (Why IoT Exists)

Industrial Internet of Things

Real-Time
Monitoring &
Decision-Making

Predictive
Maintenance

Automation &
Efficiency

Cost Reduction &
Optimization,

Productivity
Improvement

IoT Motivation & Applications

smart asset
tracking and
management

smart bedside
monitors

wearable devices

AI-powered virtual
assistants

sensors collect
data

analytics
generate insights,

and actions are
taken

**The reality is that each
layer is highly complex**

IoT Evolution

Early Adoption

- Simple devices like industrial sensors
- RFID tags
- Tracking & Monitoring

Smart Home & Industry 4.0

- Smart ecosystems in homes, cities, and industrial settings.
- Cloud Computing, AI/ML Analytics

Internet & Mobile Revolution

- Rise of smartphones, wireless and high-speed internet

Future of IoT

- Emerging technologies like 5G, AI, advanced computing and blockchain will further accelerate IoT growth and adoption.

IoT Motivation & Applications

- **Real-Time Visibility**

Enables live monitoring of machines, environments, and operations for faster, smarter decisions.

- **Automation & Operational Efficiency**

Reduces manual effort, optimizes processes, lowers cost, and improves productivity.

redictive Analytic

- **Predictive Intelligence**

Anticipates failures before they happen, minimizing downtime and maintenance costs.

User Experience

- **Enhanced User Experience**

Powers smart homes, wearables, and connected devices for convenience and personalization.

DIGITAL TRANSFORMATION

- **Digital Transformation at Scale**

Forms the backbone of modern industries—healthcare, agriculture, retail, transport, and smart cities.

- **AI + Cloud Integration**

Combining IoT with AI and cloud unlocks scalability, intelligence, and long-term competitive advantage.
